Cats-dogs

December 13, 2017

1 Cats vs. Dogs

```
In [1]: import numpy as np
        import matplotlib.pyplot as plt
        %matplotlib inline

        import os
        import os.path as op
        import shutil
```

1.1 Data processing

1. Divide training dataset into train/cats and train/dogs.
2. Create validation dataset.
3. Display one image.
4. Use `ImageDataGenerator` and `augmenting_datagen.flow` to do data augmenting for individual image.
5. Use `augmenting_datagen.flow_from_directory` to randomly choose one image from training set for dogs or cats, then do image augmenting.

```
In [2]: # Make data in different folder
        data_folder = op.expanduser('cats-dogs')
        train_folder = op.join(data_folder, 'train')

        def rearrange_folders(folder):
            image_filenames = [op.join(folder, fn) for fn in os.listdir(folder)
                               if fn.endswith('.jpg')]
            if len(image_filenames) == 0:
                return
            print("Rearranging %d images in %s into one subfolder per class..."
                  % (len(image_filenames), folder))
            for image_filename in image_filenames:
                subfolder, _ = image_filename.split('.', 1)
                if not op.exists(subfolder):
                    os.mkdir(subfolder)
                shutil.move(image_filename, subfolder)

        rearrange_folders('cats-dogs/train')
```

In [3]:
```
# Take 500 images of cats and 500 images of dogs as validation
n_validation = 500
validation_folder = op.join(data_folder, 'validation')
if not op.exists(validation_folder):
    os.mkdir(validation_folder)
    for class_name in ['dog', 'cat']:
        train_subfolder = op.join(train_folder, class_name)
        validation_subfolder = op.join(validation_folder, class_name)
        print("Populating %s..." % validation_subfolder)
        os.mkdir(validation_subfolder)
        images_filenames = sorted(os.listdir(train_subfolder))
        for image_filename in images_filenames[-n_validation:]:
            shutil.move(op.join(train_subfolder, image_filename),
                        validation_subfolder)
        print("Moved %d images" % len(os.listdir(validation_subfolder)))
```

In [4]:
```
from keras.preprocessing.image import array_to_img, img_to_array, load_img

img = load_img(op.join(train_folder, 'cat', 'cat.249.jpg'))
x = img_to_array(img)

print(x.shape)
```

```
Using TensorFlow backend.
```

```
(336, 344, 3)
```

In [5]:
```
# Display the image
def disp_image(im):
    if (len(im.shape) == 2):
        # Gray scale image
        plt.imshow(im, cmap='gray')
    else:
        # Color image.
        im1 = (im-np.min(im))/(np.max(im)-np.min(im))*255
        im1 = im1.astype(np.uint8)
        plt.imshow(im1)
        # Remove axis ticks
        plt.xticks([])
        plt.yticks([])
disp_image(x)
```

In [6]:
```
# Image augmenting
from keras.preprocessing.image import ImageDataGenerator

augmenting_datagen = ImageDataGenerator(
    rescale=1. / 255,
    rotation_range=40,
    width_shift_range=0.2,
    height_shift_range=0.2,
    shear_range=0.2,
    zoom_range=0.2,
    horizontal_flip=True,
    channel_shift_range=9,
    fill_mode='nearest'
)
```

In [7]:
```
# Plot image augmenting for 1 iamge
plt.figure(figsize=(11, 5))
flow = augmenting_datagen.flow(x[np.newaxis, :, :, :])
for i, x_augmented in zip(range(15), flow):
    plt.subplot(3, 5, i + 1)
    disp_image(x_augmented[0])
    plt.axis('off')
```

In [8]:
```
# Augmenting all images
flow_all = augmenting_datagen.flow_from_directory(train_folder, batch_size=1, target_si

# Display Image with their labels
plt.figure(figsize=(11, 5))
for i, (X, y) in zip(range(15), flow_all):
    plt.subplot(3, 5, i + 1)
    plt.imshow(X[0])
    plt.title (y[0])
    plt.axis('off')
# [0,1] shows the label for dogs while [1,0] shows the label for cats
```

```
Found 24000 images belonging to 2 classes.
```

1.2 Loading a pre-trained network

1. I used ResNet50 network whichi has 54 parameterized layers (53 convolutional + 1 fully connected for the softmax)
2. Remove the last layer

```
In [9]: import keras.backend as K
        K.clear_session()

        from keras.applications.resnet50 import ResNet50, preprocess_input
        full_imagenet_model = ResNet50(weights='imagenet')
        print(full_imagenet_model.summary())
```

```
